Today I had a real nice time fishing Pickering Creek in the DHAO section outside of Phoenixville. I caught 9 trout including one fat Rainbow with a hooked jaw. I took a photo before releasing the fish. Three hours later I went to get my camera to show my son and realized that it is missing . I can only assume that it fell out of my waders at some point . It is an Olympus waterprrof camera and it is in a soft black pouch with velcro and a string attached. If anyone has found it I would love to have it back . It is filled with some of my better fish pictures from 2012-2013 . If anyone on this sight happened to find it I would gladly offer a reward for it's return .

Thanks, Brian
