If you are testing these items because of something you saw or read I wish you the best of luck in your testing. I am not that adventurous - and I try to stay away from the commercially advertised specials we see on TV. (like the Mighty Bight) for the following reasons:

1. The people are paid to do the advertising, and people will sell anything just to make a few bucks (I.E. Pet Rock)
2. I believe the fish are lab fish and maybe underfed to begin with and therefore would strike anything out of hunger. You could probably throw a paperclip on a line and get the fish to strike.
3. Do we really know what their eyesight perception is?
4. Rhymes and laughter in a commercial, to me, says their not confident in the product.
