For nymphs, PT in 14-16, green caddis 14-16, yellow stone 6-8. If you do see bugs flying around it will likely be olives and maybe a few paraleps. If you see small black winter stones, you can ignore them.....the fish do too. There is a good chance you will see some Chimarra caddis (charcoal #18 with a cream / yellow larva #18).

+1 on the DRC. Talk to Bart in the shop. You also have Coz at Borderwater Outfitters and the crew at the WB Angler. Read fishing reports and take that info with a grain of salt. Remember, their goal is to get you to come to town so "river on fire" reports happen frequently and you show up to find that the river isn't even smoldering. LOL.
