I've seen events posted but have missed the opportunities. Well yesterday afternoon i fished a flat upstream from the fly shop and hooked into a trout on my olive WB. Lost him and when he spit my hook he snagged me! Had lots of follows but seems like they get up to my fly and turn away. Lotta action on the "swing"(?) part of drift. I feel im gonna scope in on these fish soon.

Another question bout LL and specifically AI's rat, should i fish it like a dry fly on/in film? Heard great things about this fly but can barely tie it on my line let alone fish it. Thanks in advance.
