As Chaz said, Hatches II is great. It's the book I reference most often. The Fauceglia book is at the top of my list to purchase. I have a book simply called Mayflies by Knopp and Cormier and it's very good but some of the classifications have changed since it's printing. Also, the Meck, Weamer book is a nice quick reference. Like anything with fly fishing, I started out with one of them and somehow ended up with more than I need.

Oh, I'm not sure if it's still being maintained, but the [www.troutnut.com](http://www.troutnut.com) website was always an good place to see pics of bugs as well.
