Type the coordinates into Google maps and add a - to the second coordinate and it will take you to the streams mouth. Now I'll warn you that there are 67 Laurel Runs and over 20 Laurel Creeks in PA with as many as 4 or five of the same in any particular county, so yes just looking at a map won't always get you to the right stream. You can take the coordinates and look at a gazetteer of PA and find the stream you're looking for.
