Nice looking fly Jay . I know a guy that once he ties a fly with the desired action he wants he uses silly putty and makes a mold of the spoon of the fly so he always gets close to the same action of the fly plus its speeds up tying the fly . I would also use some glitter and I also know some guys use some sort of weighted keel to get more action out of the fly. Terry Peach from Marblehead fly fisher in Del. ties these flies all the time and fishes for shad like its his job i'm sure he would give you a few pointers.
