Glow in the dark flies work, I used them today for steelhead in ohio. The glow in the dark halo eggs I used out preformed the regular ones and I used both. Anything that had the glow in the dark material they crushed. They wouldn't touch the regular stuff. This was during daylight too. My buddies and I put on a show on the grand fishing glow in the darks. So be skeptical if you want. They work for me. By the way Mike I hope you like the glow in the dark material. That was me who listed it.
