This is the knot I use and never had a problem. It saves alot of time and tippet all you need to do is pull the tag end to remove the dropper,coil it up and store it until you wanna use it again. You can store it in a small zip lock bag or a round (puck style) plastic container. Think pink bubble tape container.

P.S.....I don't use the hooks just the knot.

Good tip, DD

Hopefully I can remember that the next time I want to throw tandems out there.
