Went out Friday and Saturday.

Codorus creek- slow fishing used a hot pink nymph size 14 and had a few on but nothing to hand. Little creek chubs were hammering a parachute on the surface but too small to get hooked. Still seein some stocked palominos in some bigger holes. Good to know because that means the other stockies are probably still there too.

Gunpowder- got there around 11am Saturday water temp was 37 nothing happening on the surface. A lot of followers on white streamers. One fish to hand on a pheasant tail bead size 16. Water was clear. Around 2 stoneflies were everywhere then some rises in a nice riffle before a large pool. They would t take a parachute or stonefly but did have one on a size 12 caddis always good to see a good splashy rise to a caddis.
