The DeLorme maps are fine but sometimes you need a more detailed map. I also use google maps and you can zoom in and save the map to an image editing program like MS Paint.

When you have the map browser window open use keys "Shift" and "PrintScroll" or "PrtSc" (usually found in the upper right on your keyboard) simultaneously, then open your image editing program and choose "paste" or "insert clipboard" and you can save the map for printing, add your notes including mileage ect and print them and take them with you.

I have dozens of stream locations saved on my computer, some are hit & miss but you will find out when you get there. Don't forget to make use of State Forest and Gameland maps as well.
