A stone clinger nymph would be a march brown, Olive Uprights, Yellow May's, August Duns,.

basically the may flyies with large triangular shaped heads and bodies with thick legs. They cling to the rocks on the bottom.

Look up Oliver Edwards stone clinger pattern for a better idea.

When Oliver Edwards is talking about "march brown, Olive Uprights, Yellow May's, August Duns", he is talking about insects that do not exist in North America.
