Fishing Emergers/ Emerging Caddis Patterns?

Hey all,

I feel kind of bad about asking this, but i need help. I was on a stream that had fish rising slightly out of the water for emerging caddis and i was lost. Even though i try to convince myself differently, I am useless when it comes to fishing emergers. I have hardly any practice doing it, and I hardly tie any because of this. I was just wondering if anyone had advice on how to get a natural presentation in front of these fish that were about three to four inches under the film? And if so, do you have any patterns that work best? I know of the sparkle pupa and such, but my knowledge ends there....

Thanks!
