Have some sad news got into some smallies sunday but caught a couple with some sort of fungus problem I would say 2 out of 30. Its like a white mold growth on the belly and tail. I also saw some pictures of bass with large black spots. North branch Wyoming county.

Melvin,

Let the PFBC know. If you've got pics, better yet. They'll want to know the location, date etc. Just report specifically what you saw (not rumors or photos from somebody else as these may already have been reported). Bass with fungal growth or spots are common in the Susky but the agency needs all the data and reports they can get as studies continue.
