Your using the base hair at the tail if it splays with more tension because its hallow. (a wide flared hair isnt bad either)Thats the hair u use for the rudder 1st lift of hair on the hook bend. Then wrap over top tour capture wraps and take it back to what ever angle ya want. And as far as wire goes I don't leave anything to chance I use 60 to 90 pound salt rigging wire. Breadlon breaks it aint made for tension and lacks the stiffness to hold the loop shape.
