These trout from what I have read were a strain that was developed in a particular hatchery and were stocked. They have now reproduced in the wild and comprise about 50 % of the wild browns that are in Italy. I have found this from several sources.

<http://www.salmonfishingforum.com/forums/thread21353-7.html>

I found another reference that stated the hatchery was "enhanced" by Mussolini to produce these fish, but I can't locate that reference again.
