maybe to you but a fish sees differently than us. if that is the case why not carry 2 flies black and a white one and no others. this whole thing has been wheather a dark fly or pink fly or red fly, if color is not that significant why worry about that.

Actually had a friend several years ago do this. He tied 2 different flies one had a cream body & the other had a dark gray body. He tied these in sizes 10 - 20. These were all dries. Oh, & no wings, just hackle, tail, & dubbed body. And he caught plenty of trout. He said he saw no difference in his numbers with matching the color or not.
