I was hoping to get some information and input on the Fish Cat 13 pontoon. I have been struggling for the past four months on whether to spend the money on the purchase or let the dream go. I have limited experience with fly fishing from a boat and all that experience has been out west. I've read all the literature and even watched all the videos on line but still have some reservations. My primary focus would be to use it on the Lehigh. Would the Fish Cat be able to handle that river? Since I fish solo, would I be able to maneuver the craft while still being able to fish? Also, how many waterways would be able to accommodate the use of such a boat? I'd hate to drop the money to find that there were only a few that I could use it on. I have been to the dealership on three seperate occassions to buy only to "chicken out" at the last minute. Just not sure. If anyone has any hands on experience with the Fish Cat 13 or opinions to my questions I would greatly appreciate it.
