I've been searching and researching everywhere. My catch ratio is 0%. Something's gotta give.

For nymphing, it seem the consensus for Amnesia in the leader is Butt section, 12" - 18" of red or green in 20 lb.; then 12" - 18" of the other; then the midsection and then tippet off of that. Of course, this is all dependent on leader length.

Am I reading this correctly?
