I think on certain streams size = presentation in order of importance. And this depends on the hatch. For example I also throw a size 8 Iso when size 10s are hatching and the fish slash at them. However if a size 20 sulphur is hatching and the fish are on them you better have a size 20. It doesn't mean you can't pick up a fish here or there throwing something bigger, especially during blanket hatches, but from my own experience with certain hatches and rivers size is just as important as presentation.
