I can vividly remember the cicada hatch of 1996. I work in the woods and the company I worked for in '96 was based in Berks County. There were areas in the southeastern counties where the bugs were everywhere! Unfortunately back in '96 I wasn't smart enough to tie some up and fish them. I really don't know what the intensity was in the northern counties. Guarantee I will have some with me this year just in case. I'm hoping to get into some smallie action on Cicadas this year.
