I tried what osprey spoke of when I was younger. There was about a 8ft falls/rock slide that I would catch natives up to, but not above in a little mouintain freestoner called Tublick run.

More than once I moved fish above the falls and they would just not take hold and always left me dissappointed.

Funny, back in those days every trickle I came acroos had natives in it except that one and I just couldn't bare it.

Yep. I was spoiled.
