I agree that tying a dropper on the bend of the hook causes a lot more misses. You can try to thread a second tippet through the eye of the hook for a dropper, but why not just tie a clinch knot on the first fly and leave a long tag on it to tie on the second fly? No need to try to thread a second tippet through the eye and one less knot to tie. I've done this for a long time. It works!

Even better!
