URL:

I've been told the Grannoms are emerging on the LJ and prior to the emergence the fish key in on the Larvae and pupa. I saw this fly on a very popular fly tying web site. I tied a few this afternoon.

Hook - Mustad 9672 #14

Thread - Black 8/0 Uni

Underbody - One course of .015" lead wire

Case - One each grizzly, barred ginger, and dark brown hackle palmered to within 3/16" of eye.

Abdomen - Bright green chopped Antron

Head - Black Haretron

When you are done with the fly hold it in a pair of hackle pliers and trim the hackle square and tapered small towards the bend.
