have used the monocular a bit, works quite well given cost. I know very little about optics, but 6x (the 6 in 6x30) is lower power than 8x or 10x monoculars, better to use on the go. 30mm lens (30 in 6x30) gathers more light than say 20mm lens.

the 6x30 barska works well even wearing glasses. once in a while I see a bear or coyote, hope to get a better look next time...
