The rainbow I'm sure is still swimming unless creeled.

I've caught a few 6-7" stockies this year, and even though they're rainbows, stocked fish have a distinct body shape. Body is much bigger than it should be due to over feeding. That fish, without looking at a close up, didn't have that distinct body shape. If I had to guess I'd put it, just due to those factors closer to the "Native" side lol. but maybe just 51% sure.
