The water temperature trend line in Phila and Chester has been up for the past four or so days and the striped bass have made their way into the shallows. Fishing was fairly good for the first trip...32 fish among five guys on the outgoing tide. Largest was 33 inches; 10 were smaller than the slot size, the rest were between 20-28 inches. They will remain in shallow spots until the next multi-day downward water temp trend, however temporary, begins and then return when the water temp trend begins an upward swing again. This will go on throughout the rest of the month and for the first 3.5 weeks of May.
