finished it today for the first time and in multiple locations listed as class A, Trout Bert hopefully you read this because I know you've caught them out of there, but I did not see a 1) chub 2) sucker 3) trout 4) many bugs 5) many nymphs 6) or class A or trophy trout signs on the stretch. Did something happen to the stream that it lost its life or did I have a rough day? on thing I did see is a stream capable of holding numerous trophy fish.
