I did my other two running lines for my shooting heads, big loops so you can fit the whole head through still spooled up and you can do any line float sinking what ever. It seems that the companies are doing it. And my opinion from being a plastic welder for a few years you can "weld" the same materilas together with out issue. But different wouldnt bond. So you could weld a line to its self. But I highly doubt you could weld a rio (pvc based) to an airflo (polyurithane based). Thats how you can use heat shwrink thats definitley polyethylene(can tell by the smell) and they will not bond to each other.
