fished said centre co. stream from friday till moday and there were in fact suphurs...that being said,the #of them coming off were sporadic at best,however,the sulphur nymphs were extremely active,especialy on friday and sunday evening.we were staying right on the creek at the "line camp"and we spent some time "seining"bugs in front of the camp.the small net came up FILLED with dark swimming sulphur nymphs almost every dip on friday afternoon...MANY FISH caught on different sulphur patterns.amazing few days.also watched a large crow take an immature bobcat "to school"for @10 minutes on saturday evening;the crow would hop down a large downed tree to the end till the little bobcat would lunge at him at which point he would fly up to the top of the log and start the "game"over again...fun to watch.
