The only other person that wrote it was JDaddy.....rainbow.....oh by the way did you mean the first fish in the video or the big rainbow? The first one , the smaller one . the pic isn't clear enough for me to tell , of course instead of blaming it on your pic it could be my eyes are gettin old. What are those dark marks on the flank when you flip him over? Usually because of the slime membrane stuff doesn't stick , are those marks part of the fish? I'm talking about the marks on the big one you flipped over.
