I think taking a wild brown from a mainly brookie stream is a good thing. Other than small feeder streams, I've only encountered a couple of brookie only streams anyway. I have kept 2 wild brown trout and they are both on my wall (18"/19"). I have never intentionally killed a a native brook, I never will. Those bigger browns can and will play hell on small natives, so I say keep the big ones. Here's one of those two.
