Dry Fly Tying thread?

I'm getting into tying dry flies, size 12-16 caddis, adams, BWO...

My question is what thread is best? I use UniThread now for tying nymphs, but I don't have the correct colors for the dry flies I want to tie. I've been looking at threads and found that there's thread that's flat and waxed (Saw it at bass pro shop). Was wondering if waxed thread is a good idea for dry flies, thinking it might help resist water?
