Fished the Narrows section from 6PM to 8PM. Spent most of the time fishing a dry dropper rig in a riffle flowing into one of the classic deep long pools in that section of the stream. I've always heard that this stream has a small brookie population, but I wasn't able to confirm that until now. I found a small pod of brookies and was able to catch a few of them. They were lighter colored fish that were around keeper size. I was also able to catch one average sized brown on a green caddis larvae. The insect activity was pretty light with caddis, midges, and even a few early sulphurs hatching. I was hoping that a nice spinner fall of some sort would occur near dark, but that didn't happen.
