I'm getting into tying dry flies, size 12-16 caddis, adams, BWO...

My question is what thread is best? I use UniThread now for tying nymphs, **but I don't have the correct colors for the dry flies I want to tie.** I've been looking at threads and found that there's thread that's flat and waxed (Saw it at bass pro shop). Was wondering if waxed thread is a good idea for dry flies, thinking it might help resist water?

Dirty little secret no fly shop wants you to know:.....buy white thread and use a Sharpie to color it! 🤪
