Small artificial mice/frogs and top water (white) poppers work real well. Anything that resembles a crayfish will work nicely. Last year while I flyfished I realized that if I sped up the action to a point beyond the striking speed of sunnies and blue gills I was able to catch more bass than anything. The 5 wt will work great unless you are fishing lily pads and thick grass.

Yesterday I got a 4lb sucker with a Brassie nymph on my 3wt - gave me a great fight.
