Distance Calculations

The distance as the crow flies is a simple mathematical calculation however calculating based on driving distance or drive time would mean calculating the route through the actual navigation app in the phone for each point. This would violate my developer agreement and even if it didn't, it would take far too long to get the results to make the app useful.

My suggestion would be to push the go button and double check actual navigation time just to make sure your don't have to drive 60 miles around the mountain to the closest point. 😊
