A tip to people who prefer google maps - if Apple maps pops up when you press GO, select the bus icon. Apple doesn't seem to be able to do bus routes just yet, so it'll give you the chance to open in a variety of other apps - google being top of the list. Just click, make sure it's set to driving instead, and you're off!

I find this much easier than the copy/paste method that is a bit cumbersome in the iphone.
