It's very difficult to tell from the picture. I'm forced to guess at my usual indicators. My guesses may be wrong. So I'll say ahead of time my confidence is low on this one.

I too see only 2 tails. And I see no large hind wing, it could be absent or small. The wing is not mottled. I'd guess it's in the baetis genus, honestly.

What size was it? 18ish? or 14-16ish?
