I would have never found that...is it in the center of the pic?

This reminds me of something that happened to me last week. I was fishing dry flies for the first time this year and trying to place my fly just on the edge of some brush over hanging the opposite bank. The fish were laying right there... On one bad cast I got snagged and rather than spook the fish I gave it a good quick yank and broke it off... I Tied a new fly on and all was well...a little while later I get snagged again. I yanked it back and my new fly had brought back the first fly!! Later I got snagged again in the same spot, and brought back yet another fly, this one was not mine. I was up one fly that day!
