I will have to read that book you mention, it has been recommended to me in the past. I don't believe it was you who mentioned induced take to me the first time (I think it was a thread regarding midges I started). None the less, its a great technique and it is how I always fish a midge or nymph....it costs nothing. if a dead drift is not triggering a strike or the water column is not read properly....I do it all the time
