You see Greenghost, a frack is a frack, so they are all the same because the name is the same. By the same token, a Trico is the same as a Green Drake because they're both mayflies. Just because one is a zillion times bigger doesn't mean they're not the same just so long as you call them the same thing. Once you learn these mind over matter things it's all good.

PR flaks, lobbyists and politicians play this game nonstop.
