Have to wait for the fish to eat and turn down with the fly... easier said than done. Fish the banks, plop the popper down and let it sit as it drifts down stream, wait, pop it once, wait and let it drift, repeat as necessary. Another good tactic is to pop the fly so you pull the it under water for 6-8" and then let it rise back to the surace and let it sit and wait. The take often comes durring the pause.
