Weamer true form hooks

URL:

I was out the other day and used a sulphur spinner tied on a weamer true form hook. Had 2 solid takes, waited for the fish's head to tip down and set the hook. Both times the hook did not find home. Switched to another pattern and got solid hooksets right away. Anyone else have issues with these hooks, or any tricks to using them???

Perhaps it was just not a good day for that hook/pattern. I'll try it again and see what happens.
