Krayfish,

There is no data showing natural reproduction in the main stream itself. We are currently trying to find out why that is. We think it may have to do with the release flows. This is the main reason Trout Power was founded.

There is information that states natural reproduction is happening in some of the tribs to the creek. It is still mainly a put and take fishery. Some of the fish that reproduce in the tribs find their way to the West Canada.

martin,

It was also nice talking with you about golf. Good luck with the new job and if you ever get up to Up-State, NY look me up and we can either fish or play golf.

Thanks,
