Rod was lost in a section of river that has at least 8 pools with virtually zero current just to reach Equinunk. A couple of the pools are a mile long or more. It is then quite a few more miles and a bunch of "dead water" to reach Kellums Bridge. I talked to 3 different guides about where it was lost and all 3 said it only would get as far as the turn in Cadosia. In fact, the one guide found the 3 top sections of s T&T rod floating. The reel section is still on the bottom of the river.

Rod + reel + line + backing = sunken fly rod
