How far downstream did the de-watering extend?

Down as far as the Spring house. I walked the lower section, below Newlins Mill Rd., the stream is very low but I did see fish.

Most of the dewatering was from RT191 to Tatamy.

JeffK is correct with everything he said. But when they do shut down, it will take years to fill the quarry to the level required to provide a neutral head pressure. I don't think that will be happening soon. They want to extend the quarry and move RT191 to do it.

Our TU President sent the plant manager an email requesting a meeting and he agreed to do that. We just have to set the meeting up.
