Warmouth: Extremely rare in SE Pa. To my knowledge, biologists have identified one in the past 30 yrs., and that was just recently. There may have been others over the past 30 yrs, but I know of only one.

Interesting.

I do a good bit of FFing for warm water species and panfish and I have never seen a warmouth in all of my fishing in PA. I used to catch tons of 'em in Michigan, where locals called 'em "mud bass." I rarely fish the Ohio River drainage and mostly focus on the waters here in the south central however.
