The guage is rising quickly. I'm guessin it will be blown out or fairly stained. Fished it Sat and it was slightly off. Saw some bigger tan caddis, golden stones , TINY mayfly assumed to be olives (#24), a handful of cahills and not all that many sulphurs. We did have fish hitting a large iso nymph but it was pretty slow. Right at dark, there was a flurry of rises. Keep an eye on the gauge. If it's your first time, I'd say 425 cfs should be you max.
