The "Troutiest" of rods?

Ok, so doing some reading I hear two rods are the "troutiest" of all time...but can someone explain that?

9 foot 4 weight (not the standard 9' 5 weight)

and the 8'6" 5 weight

What are the advantages of the 9' 4 over the 9' 5? I have heard that many 4 weights today are like 4.5 weights and many 5 weights are getting closer to 6 weights from back in the day. Thanks!
